

**WHAT IS CLAIMED IS**

1. A light reflector for personal items comprising a light reflective base plate on which at least one light reflecting cone is formed.
2. The light reflector as claimed in Claim 1, wherein the reflecting cone is raised on a surface of the base plate.
3. The light reflector as claimed in Claim 1, wherein the reflecting cone is comprised of a number of flat faces of different angular orientations.
4. The light reflector as claimed in Claim 1 further comprising a mount wall extending from the base plate.
5. The light reflector as claimed in Claim 1 further comprising a light non-transmitting layer formed on a surface of the reflector.
6. The light reflector as claimed in Claim 1 further comprising a circumferential side wall extending from the base plate and forming an open end to which a lid is removably mounted.
7. The light reflector as claimed in Claim 7, wherein a light non-transmitting layer is formed on the base plate and the side wall for preventing reflected light to disperse.
8. The light reflector as claimed in Claim 1, wherein the base plate is bent to form a cylinder having an inside surface defining an interior space, the cones being formed on the inside surface and located in the interior space.
